SOLAR SHRINK (CNG)

RECOMMENDATIONS FOR INSTALLATION

Solar Shrink® can shrink up to 5% in the sunlight. This process begins as soon as the lightweight film is exposed to direct sunlight and higher temperatures. For this reason, we recommend that you avoid laying Solar Shrink film in the middle of hot, sunny days. Early mornings, late afternoons, or cloudy days are best.

Once installed, Solar Shrink shrinks to conform to the bed surface in a few hours or less.

STORAGE INSTRUCTIONS

Solar Shrink can be kept for more than a year if stored properly. Keep rolls of Solar Shrink in a cool, dry storage space out of direct sunlight.
