Pro 5 Weed Barrier Fabric Installation Manual

7030 E 46th Avenue Dr, Denver, CO 80216, United States
support@hensleyseeds.com | hensleyseeds.com

INSTALLATION:

- Unroll fabric laying fuzzy side down. This ensures water easily permeates the fabric, as well as help to keep it in place during installation.
- Anchor the fabric to the ground with row cover staples every 5 feet — closer if it will be exposed to strong winds. If covering a large area overlap the fabric at least 6 inches.
- Cut an X or circle in the fabric to plant through into the soil, or use a flame weeder to burn holes into the fabric. The yellow lines spaced 1 foot apart make an excellent planting guide.
- If used for ornamental use, apply 3 inches of decorative stone or bark mulch over the fabric.

IMPORTANT:

- Fertilizers can be applied over the top of Pro 5 Weed Barrier fabric. It will leach through the fabric without decomposing the material.
